## CHARGING.

Whether you're charging your electric car at home or out and about, Opel's versatile charging strategy helps you to stay flexible. And that means for those shorter everyday distances or longer trips.

### PRIVATE CHARGING.

We offer a broad range of home and office charging solutions.

[› LEARN MORE](#)

### PUBLIC CHARGING.

Stay flexible on the go: Opel's public charging plan through Free2Move Services provides access to an extensive network of charging points across Europe.

[› LEARN MORE](#)

## STRESS-FREE CHARGING AT HOME OR WORK.

On average, people only drive 60 km a day. You can recharge your battery sufficiently for this distance overnight, using a standard home electric socket (1.8 kW). Want to charge up to 5 times faster? Then install an optional alternating current home charging station – also known as an AC Wall box. Higher specification AC Wallbox models are equipped with energy meters, allowing you to trace the electricity you consume while charging at home.

### AC Wallbox home charging.

The AC Wallbox can be fitted to your home or workplace, and to stand-alone buildings or apartment blocks, as long as local planning permission has been granted. According to the European directive, you have the right to install a private charging solution, so getting planning permission should be relatively simple.

Your local Opel dealer will suggest a charging package that's best for you, depending on your usage, your battery type and your car's range. Your dealer will also refer you to a diagnostic service that assesses all your electrical installation requirements.

Our tip: if you're unsure whether a Wallbox will pay off for you in the long term, a universal charging cable could be the better option. It enables faster current flow and works everywhere; with normal sockets at home or work and with public charging station sockets.

## QUICK AND EASY PUBLIC CHARGING FOR ELECTRIC CARS.\*

There's already an extensive network of public charging stations all over Europe, so you're never far from a reliable power source. As an Opel customer, you get to benefit from our public charging plan through Free2Move Services:

- Access an extensive network with over 105,000 public charging points across Europe, with new charging points opening day by day
- Easy payment via an app or charge card
- Pre-select charging points according to distance, charging cost, your speed and remaining battery power
- Your connected navigation system helps you find the selected charging stations

\*Available together with the Trip Planner and at additional costs.

## MOBILITY SERVICES.

Opel's mobility services ensure you stay mobile – by helping you plan your route in advance, providing assistance while you're on the go.

### TRIP PLANNER\*

Goodbye range anxiety. Hello Trip Planner, the web-based mobile service that makes e-journeys so easy.

[› LEARN MORE](#)

## ALL WORKED OUT AT A TOUCH OF A SCREEN.

Thanks to the Free2Move's Trip Planner, you don't have to be a wizard at maths to use your electric car. The trip planner proposes an optimised route to single or multiple destinations. It then indicates the charging points you need to include in your route and the charging station cost taking into account your remaining battery charge and your previous driving style. The information can then be sent to your cars connected navigation system and displayed on the onboard touch screen.

\*Available together with the Charging Pass and at additional costs.

## CAR MANAGEMENT.

Get the most from your electric car whether you're actually driving it or not. e-Mobility coaching gives you helpful driving tips that can increase your car's range while remote functions allow you to control everything from battery charging to the interior temperature via your smartphone. How cool is that?

### E-MOBILITY COACHING

Not only does e-Mobility coaching help to maximise your range and save money in real time, but you can also see how well you're doing compared to other users.

[› LEARN MORE](#)

### REMOTE FUNCTIONS

Want to make changes to your battery's charging schedule, warm up your car or cool it down? It's simple, just use your smartphone!

[› LEARN MORE](#)

## E-MOBILITY COACHING: SIMPLE AND FUN.

Learn to save as you drive. Opel Connect e-Mobility coaching features:

- Driving tips that help maximize your electric car's range
- Real time driving statistics
- Receive your charging status remotely as a smartphone alert
- Compare your performance to other drivers.

## DO IT ALL FROM AFAR.

Opel remote services provide unprecedented remote control of your electric car, all with a couple of taps on your smartphone:

- **Remote battery level check:** see how much battery power you have left including your approximate remaining range
- **Remote charge management:** Plan your charging schedule to take advantage of periods when electricity is cheaper. See how long it will take for your battery to recharge completely and receive alerts accordingly.
- **Remote temperature control:** monitor and control your car's interior temperature as well as the battery charge prior to setting off. Useful for cold winter and hot summer days to optimise your range.

## INSPECTIONS & GUARANTEE.

Opel FlexCare is a convenient all-in-one program for your peace of mind. We offer packages that include Roadside Assistance, Extended Warranty and Vehicle Servicing, all tailored to your individual needs and the specifics of your electric car

### ELECTRIC VEHICLE SERVICING CONTRACTS

Good news: electric cars have fewer moving engine parts than a conventional-engined car, which means lower servicing costs. Opel FlexCare servicing contracts provide expert, e-vehicle-specific maintenance and care plus exceptional value.

### BATTERY WARRANTY

All our electric cars come with an eight-year or 160.000 km battery warranty for at least 70% of its original charge capacity after this time or distance. We also provide you with a Battery Capacity Certification that confirms your car's battery charge capacity to help facilitate the resale once you come to renew.

## CUSTOMER SUPPORT.

Opel call centre and roadside assistance services are there to provide electric vehicle owners with the same peace of mind Opel owners have come to expect. Wherever you travel in Europe in your electric vehicle, rest assured we'll always be there for you should you need assistance.

### ELECTRIC VEHICLE CALL CENTRE

Our call centre operates specifically for battery electric vehicles (BEV) and plug-in hybrid electric vehicle (PHEV) owners. Specially trained staff are on hand to provide technical support and advice on charging facilities, servicing and maintenance.

### 24/7 ROADSIDE ASSISTANCE

Roadside Assistance is available 24/7 in all co-operating European countries. (The list of co-operating countries can be found [here](#)) Included as part of the service is the identification and location of Group PSA dealers across Europe that are equipped with charging points. In the unfortunate case of a breakdown, the recovery to an authorized dealer only is also included.
